

3 BENEFITS OF OWNING YOUR OWN CONCRETE BREAKER

(AND HOW TO CHOOSE
THE RIGHT ONE)

LAWSEN
EQUIPMENT

At Lawsen Equipment, we believe every construction crew, landscaper, or farmer with a skid steer or excavator deserves attachments made to handle normal wear-and-tear without requiring constant maintenance.

This is especially important when it comes to jobs such as breaking up concrete. Not only can it be a difficult and time-consuming task, but it is hard to break up concrete and can be dangerous if you don't have the right tools for the job.

That's why we offer a wide range of concrete breakers that are designed to make the job easier and safer. We offer a variety of sizes and types to choose from, so you can find the perfect breaker for your needs.

Now, maybe you're wondering, "Why spend the money on purchasing my own concrete breaker when I could just rent one every time I need to break up concrete?"

Following are three benefits worth considering when it comes to owning your own concrete breaker.

01 PROPER SIZE FOR YOUR MACHINE

Concrete breakers are essential for quickly and efficiently getting the job done when you need to remove concrete from a construction site or from your own property. They allow you to easily access hard-to-reach areas and work in close quarters, making them ideal for precision work in tight spaces.

Owning your own concrete breaker instead of renting one has many benefits, not the least of which is making sure you get the right size. If you don't have the right size for your machine, you can damage your equipment.

Taking the time to research and shop around helps you find a concrete breaker that is perfectly suited for your specific machine. This guarantees you will get the best performance and longest life out of both your machine and the concrete breaker.

Whether you're looking for a compact concrete breaker for a compact skid steer loader or a larger breaker that can tackle big construction projects, choosing the right concrete breaker will make all the difference. With the right

concrete breaker on hand, you'll be ready to tackle even the most challenging projects with confidence.

02 NO LONGER DEPENDANT ON RENTAL COMPANIES

When it comes to concrete breaking, rental companies are often your only option. The problem is, rental companies can be expensive!

Furthermore, with a rented breaker, you may not be able to customize settings or attachments like an experienced operator could.

Owning a concrete breaker means that you can select one with the right power and settings for any job, ensuring that breaking up concrete is as efficient and effective as possible.

Picking out the right concrete breaker depends on many factors including its size and portability, how much noise it makes during use, and the different accessories and add-ons available for it.

By researching these key features when selecting your concrete breaker, you can find the tool that will best meet your needs and make concrete-breaking projects faster, easier, and less stressful.

03 SAFE FOR MACHINE AND OPERATOR

As one of the most versatile pieces of construction equipment, a concrete breaker can be used for a variety of tasks on the jobsite.

Of course, not all concrete breakers are created equal. Putting the wrong breaker on the wrong machine can be dangerous!

When choosing a concrete breaker, it's important to consider the power source (electric or gas), weight, and hammer type (pointed or blunt).

With so many options on the market, it's important to consult with an expert to find the right concrete breaker for your needs. But once you've found the perfect one, you'll be able to reap the many benefits of having a ready and safe concrete breaker.

CONCLUSION

Owning your own concrete breaker ensures that you get the right sized breaker for your machine, that you are no longer dependent on expensive rental companies, and that you have the safest experience possible.

If you're looking for improved efficiency and greater independence on the job site, don't hesitate to invest in a concrete breaker today!

At Lawsen Equipment, we can't wait to help you find the concrete breaker best suited for your needs. Our professionally trained staff can help you consider all the necessary components of a durable breaker, such as controllability, power, and portability.

With these features in mind, you can be sure that any concrete job is within your reach.
